                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hap5b, gi|2398532. Highly similar to CCAAT binding transcription factor from many species. The C (reverse complement) at position 4078 is a T in the cDNA sequence. gi|2398532. This puts a termination codon 4 amino acids sooner in the cDNA predicted sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note="transcription factor hap5b; transcription factor

He mail for correspondence: arabésequence.stanford.edu Genes with similarity to proteins in the databases are described as 'putative', '-1ike' or 'similar to'. Genes that have EST similarity but no significant protein similarity are described as 'unknown proteins'. Genes that are annotated based only on gene prediction software are described as 'hypothetical proteins'. The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, Chris Burge, http://gnomic.stanford.edu/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Anote—"Vector: pBluescriptII SK+; Site_I: ECORI; Site_2:
Xho1; This cDNA library was constructed from mRNA isolated
from etiolated hypocotyl tissue of 9-10 day old seedlings
of the cultivar Williams 82. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(df) primer Williams 81. Complementary DNA fragments
adapters were ligated to the blunt-ended cDNA fragments
followed by digestion with ECORI and XhoI. The CDNA
fragments were directionally cloned into the ECORI.XhoI
restriction site of the pBluescript vector. The ligated
cDNA fragments were transformed into DH10B host cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Email: est@watson.wustl.edu

Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) primer Williams 81. Complementary DNA was synthesized from mRNA using a primer consisting of adapters were ligated to the blunt-ended cDNA fragments followed by digestion with EcoRI and XhoI. The cDNA fragments were directionally cloned into the EcoNI. The restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Email: est@watson.wustl.edu
